

AHSAN ALI

Senior Software Engineer — Java | Spring Boot | Distributed Systems | Microservices Architecture

Karachi, Pakistan • +92-336-1182144 • mughalhasanali77@gmail.com • linkedin.com/in/ahsan-ali-mughal • github.com/ahsan-ali-mughal

PROFESSIONAL SUMMARY

Senior-track Software Engineer with 3+ years building backend infrastructure for financial transactions, compliance workflows, and real-time data pipelines at scale. Consistent track record across ride-hailing, fintech, and government systems: as a core contributor on payments and banking teams, and direct owner of key services within them, built and operate event-driven, observable, low-latency systems supporting millions of monthly transactions. Comfortable taking end-to-end ownership within a domain — implementation, payment gateway integrations, regional compliance — with measurable throughput, latency, and reliability gains to show for it.

PROFESSIONAL EXPERIENCE

Software Engineer — Jeeny

June 2025 – Present

Leading ride-hailing and delivery platform in Saudi Arabia and Jordan (founded 2014, rebranded from Easy Taxi in 2018), with roughly 400 employees across Saudi Arabia, Jordan, and Pakistan, serving millions of rides monthly. Team member on the Payments squad and owner of Jeeny-Invoicing, working in an Agile/Scrum development environment.

Payments (Team Member)

- Contribute to core payments backend services (Spring Boot) handling authorization, capture, refund, and wallet top-up for high-volume financial transactions.
- Integrate Hyperpay, Checkout, StcPay, and Mokafaa payment and compliance systems, enabling secure financial operations at scale.
- **Conduct code and pull request reviews for the Payments squad's Java repositories**, upholding code quality, consistency, and architectural standards across the team.

Jeeny-Invoicing (Owner)

- **Own and lead Jeeny-Invoicing**, a multi-domain invoicing platform covering rides, tenant leases, StcPay payouts, driver passes, subscriptions, credit notes, and B2B invoices — implemented the PRD-defined event-driven architecture end-to-end, replacing a legacy cron job that was unable to complete Saudi Arabia's ~100K daily ride invoices on schedule.
- Architected the pipeline flow: source events publish to Kafka, route through an AWS SQS main queue that dispatches by country, business type, and reference type to dedicated worker queues for XML generation, then to dispatcher queues for regional compliance submission.
- Integrated REST API endpoints for B2B invoicing alongside Excel-based bulk upload ingestion for B2B invoice batches.
- Use Redis for config/reference-data caching and idempotent, deduplicated event processing across the pipeline.
- **Deliver regional regulatory compliance** — ZATCA (Saudi Arabia) and JoFotara (Jordan) integrations, with generation and dispatch rules driven by Jeeny-Config's country- and area-level configuration.

Observability, Fraud & Configuration (Contributor)

- Contribute to Jeeny-Matrix, an Apache Spark pipeline over Cassandra producing health metrics for payment gateways and wallets platform-wide.
- Contribute to fraud-detection monitoring workflows, improving data validation and transactional consistency across services.
- Contribute to Jeeny-Config, a centralized configuration microservice consumed by every downstream Jeeny service — serving country, area, and feature-flag data with a Redis + Caffeine multi-layer caching strategy that eliminates redundant DB calls at scale.

Software Engineer — Hailogics Inc

July 2024 – December 2025

US-based digital services agency (Indianapolis, IN) engaged part-time, US time zone, night shift, owning full-stack development across two concurrent client products: a food-tech ordering platform and a telecom IVR testing system.

- **Led end-to-end backend architecture** for the Who's Cookin app (Spring Boot, Angular, Kotlin mobile), improving API responsiveness by 40% through query optimization.
- Implemented JWT authentication and Firebase real-time database integration for in-app chat.
- Built and maintained Spring Boot APIs for the LENS IVR testing platform with a React frontend.
- Designed supporting infrastructure: S3 for audio/screenshot storage, JMS for test-result delivery, and a dedicated MOS Score Collector to offload heavy calculations from the main server.

Java Developer — Arittek Solutions Pvt Ltd

April 2024 – June 2025

Karachi-based IT solutions provider (~40 employees) specializing in core banking and Sharia-compliant financial systems for commercial and Islamic banks across Pakistan and the Middle East. Team member on DMAXOL, a high-volume financial data extraction system, with direct responsibility for the JS Bank and Meezan Bank client integrations.

- **Owned the JS Bank and Meezan Bank integrations end-to-end** within DMAXOL, a secure Spring Boot data extraction and storage system for mission-critical banking pipelines.
- Optimized financial REST API database queries, cutting average response times by 30%.
- Expanded customer statement access from a 90-day window to full account history, reducing retrieval time from 2 days to minutes.
- Automated recurring report generation, cutting manual effort by 50%.
- Built Angular-integrated APIs for reliable frontend-backend communication.

Associate Consultant — Sapphire Consulting Services

May 2023 – April 2024

IT consultancy delivering multiple e-governance and digitization projects for departments across the Sindh government — including vehicle registration, asset monitoring, and budget management systems. Worked on the Motor Vehicle Registration (MVR) project for the Sindh Excise & Taxation Department, the province's main revenue-collecting authority, serving more than 5 million taxpayers.

Motor Vehicle Registration System (MVR)

- Designed and built a Spring Boot microservices platform for vehicle registration using Feign Client and Eureka Service Registry for inter-service communication.
- Integrated Oracle database and designed RESTful APIs, improving data exchange efficiency across government departments.
- Participated in code reviews and architecture discussions, contributing to system quality and maintainability standards.

SKILLS

Architecture & Systems: Event-driven design, Kafka-based microservices migration, distributed processing, service configuration platforms, multi-layer caching (Redis, Caffeine)

Practices: Agile/Scrum, code & PR review, cross-service architecture reviews

Languages: Java, Kotlin, JavaScript, TypeScript

Backend: Spring Boot, Hibernate, RESTful APIs, JSP, Servlets

Data & Messaging: MySQL, PostgreSQL, Oracle, MongoDB, Cassandra, Redis, Apache Kafka, ActiveMQ, JMS, Apache Spark

Cloud & DevOps: AWS (S3, SQS, SNS), Docker, Jenkins

Frontend: Angular, React, HTML, CSS, Bootstrap

Payments & Compliance Integrations: Hyperpay, Checkout, StcPay, ZATCA, JoFotara, Mokafaa, Firebase

Testing & Tooling: JUnit, Mockito, Postman, IntelliJ IDEA, GitHub, Bitbucket, SVN

EDUCATION & CERTIFICATIONS

Bachelor of Computer Science — University of Sindh, Jamshoro (Jan 2019 – Dec 2022)

Java Core, JDBC & Hibernate — Bell Labs Soft Solution — Hands-on training in Java Core, Web Development, JDBC, and Hibernate for enterprise database management.
